

November 25th 2011, Baikonur Cosmodrome, Kazakhstan

ILS Proton/Breeze M has successfully launched Asiasat 7 satellite and 9 hours and 13 minutes after liftoff released the satellite to GTO. AsiaSat 7 carries 28 C-band, 17 Ku-band transponders and a Ka-band payload and will provide a broad range of applications for the Asia-Pacific region, including television broadcast and VSAT networks.
